6:15 a.m.

Saturn, Venus, and a slim waning crescent moon just above the Eastern horizon.

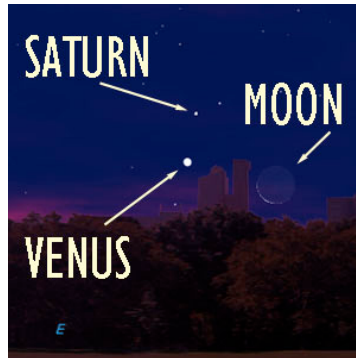

Image 2
October 16, 2009
6:15 a.m.

The Moon, Saturn, and Venus bunch together for a second day in a row. Notice how much lower the Moon sits in the sky.

11:00 p.m.

Wondering what that bright object in the southwestern sky is?

Image 4
October 26, 2009
6:00 p.m.

Jupiter is so bright that you can even see it before full darkness sets in. On the 26th it will be about a degree away from the Moon.
