Sky Day is September 20 and throughout the month of September you can join schools around the world in taking part in Sky Day Project.

[Sky Day Project](#) is an inspiring way to build a new community of learners and promote ecological citizenship. Your students will collaborate with students all over the world in the creation of a magnificent on-line citizen artwork all about our beautiful sky and learn more about how our sky functions, what its vulnerabilities are and how important it is for everyone to come together across cultures and borders to effect positive outcomes with climate.

So join in! It's free and easy to do. Here's how it works:

1. Learn more with your students about Sky Day Project here: skydayproject.com/schools
2. As a class, share your thoughts about the project
3. Sign up for a free gallery in the mosaic here: skydayproject.com/groups
4. Have your students get creative and photograph our dynamic sky. Encourage them to make it their own! No-one sees the sky quite like they do!
5. Post their photos directly to the SkyDayProject.org website

And voila! You and your students will be able to see their photos exhibited in your special gallery at [Sky Day Project](#) and share them with family and friends
